## Utility Rate Survey

### Fiscal Year 2015

---

This is the LENOWISCO Planning District Commission's 29th annual Utility Rate Survey. It contains the water, sewer, and residential garbage collection rates within the LENOWISCO Planning District (Lee, Scott, and Wise Counties and the City of Norton). It is completed each year to help the public agencies providing these services to understand where they stand with respect to their neighbors within the District.

### Comparing Utility Systems

It is very difficult to compare the rates of one system with those of another. As the information contained in this survey reveals, different systems have straight rates, flat rates, regressive rates, and progressive rates--all in varying increments. As in previous editions of this report, we have tried to devise a consistent yardstick to compare rates by computing an "average monthly bill." The United States Department of Agriculture Rural Development uses 4,200 gallons per month as a consumption rate for the average residential connection. All "average monthly bills" in this report, therefore, are based on that rate of consumption.

### A Word of Caution

There are a number of factors of which the reader should be aware concerning the figures based herein. They are:

1. Municipalities with general taxation authority operate many of the systems. Some of these systems are not supported by water and/or sewer revenue alone, but are subsidized by the municipality's general tax revenue. Rates for such systems may be artificially low because the numbers may not reflect the true cost of system operation. In contrast, public service authorities have no revenue raising capability except user fees and connection fees.
2. Several systems have belatedly started funding depreciation as a means of dealing with the uncertainties of future capital outlay needs. In almost all cases, this has resulted in a rate increase.

3. Some systems are older and therefore, their cost to construct was less. The debt loads on these systems are also lower because they were financed at lower interest rates. The newer systems obviously cost more to construct or rehabilitate and, in some cases, were financed at higher rates.
4. Consumption rates are not uniform in the District. Consumers often use less water where rates are higher, while systems with low rates have customers who use more than the national average. Again, 4,200 gallons per month was selected as the common water usage for the purposes of this survey.
5. There are great differences in system efficiency. Accountability rates (the percentage of water produced and accounted for through metered sales) vary widely. Low accountability drastically (and artificially) inflates such costs as chemicals, labor, and power, while high accountability helps keep costs at a minimum.
6. Some systems rely on other providers for treated water. They are often at the mercy of the wholesale provider when it comes to setting their own retail rates, since they have no direct control over their water source costs.

There are other reasons that make comparing one system to another difficult. The reader is cautioned to keep these factors in mind when the data is compared.

## **Wholesale Water Rates**

A table of the District's Wholesale Water Rates is also included in the study. In the LENOWISCO Planning District, there are several water providers that produce and treat their own water. Other water producers only purchase treated water from a neighboring producer, while others may do both. Reasons for this situation include:

- The service area of the retail customer base under development is not contiguous to existing supply lines of the water producer.
- Water needs to be purchased from neighboring producers to supplement existing production or emergency outages.
- A producer may have determined that the water can be purchased from a neighboring producer at a cost cheaper than it can be treated.

For clarification, a “wholesale water rate” is the cost of production of treated water combined with delivery of said water to the point of sale (a master meter). This rate may include other related expenses, such as plant and equipment depreciation plus other costs the producer may deem appropriate. However, it does not include costs that are a result of providing water to the retail user, such as the cost to set and read meters, service line maintenance and tank maintenance except where the tank is the primary supplier of the wholesale water, or debt service and depreciation on the retail side.

## **Sewage Service**

Sewage service is generally confined to municipalities, although the Scott County PSA’s Duffield and the Scott County PSA’s Holston Regional (Weber City) sewer systems; the Lee County PSA’s Dryden, Crosscreek, Rose Hill, Ben Hur, and Hickory Flats sewer systems; and the Coeburn-Norton–Wise (CNW) sewer systems are exceptions. Higher sewer rates, just like water rates, reflect the cost associated with newer or recently upgraded systems.

## **Garbage Collection**

Ten communities provide residential garbage collection. Although LENOWISCO did not attempt to determine frequency or type of collection, the information is provided, again, for comparison.

## **A Closing Word**

For communities seeking financial assistance from Rural Development, the Virginia Department of Housing and Community Development’s Community Development Block Grant Program, the Virginia Department of Health’s Financial and Construction Assistance Program, or other grant/loan programs, user rates are a major factor in determining percentage of grant versus loan, or whether a project is fundable at all. Utility systems should be operated as efficiently as possible, and the rates should generate sufficient income to support them. Systems with unrealistically low rates should not expect any significant grant assistance from the aforementioned agencies and programs. The few remaining Federal programs for water and sewer financial assistance are geared toward helping communities who are trying to help themselves. This is particularly important for those localities facing mandated sewage system renovations.
